

Lab-8 write up

Group Member: Matt Mitchell, Kyle Fluto

fluto006 is where all of the tables are created at along with all of the procedure calls.

API

- **getButtons**
 - Call the buttons from till_buttons and creates all of the buttons
- **clickButton**
 - Takes both user, button_id = id
 - Calls a procedure that takes in these to variables a new item is added to the current_transactions
- **completeTransaction**
 - Takes a user, total(of table) and then added this to the completed transaction table
 - Also clears the current transaction table to make room for a new one
- **voidTransaction**
 - Cleans the current transaction table
- **deleteItem**
 - Removes the current item from current_transaction table
- **listTransaction**
 - Updates the list of current_transaction client side after ever clickbutton or deleteitem event.
